

Climate & Sustainability TaskForce (CSTF)

CSTF is a working group focused on driving the mission of IEEE in advancing technology to support sustainability and mitigate the impact of climate change for the benefit of humanity. **The objective of the task force is to create a space for IEEE YPs to engage and work in the Climate-Sustainability-Technology interface.**

Responsibilities

In the context of Climate and Sustainability,

Create tools, resources, and support mechanisms for early career professionals of IEEE.

Serve as a focal point for YPs engaging in the Climate and Sustainability space.

Act as the interface between young professionals and other IEEE societies and working groups.

Act as the interface between IEEE YPs and global processes in Climate-Sustainability-Technology interface

As collective decarbonization efforts ramp up across the world, there is an urgent need for young professionals to be an integral part of that transformation. Future jobs, learning opportunities, and education systems are transitioning to enable further adoption of renewable energy sources and decarbonization technologies.

This working group aims to create a space for young professionals to actively engage in that conversation as well as a space for them to actively participate in the related processes." - CSTF Task Force
